3	2GI19CS046	Gourav D Shanbhag
4	2GI19CS053	Jyotiba Kolekar

Train Ticket Booking and Management System

Abstract

The Railways carries about billions passengers in reserved accommodation every day. The Computerised Passenger Reservation System (PRS) facilities the booking and cancellation of tickets from any of the 4000 terminals (i.e. PRS booking window all over the countries). These tickets can be booked or cancelled for journeys commencing in any part of World and ending in any other part, with travel time as long as 72hours and distance upto several thousand kilometres .In the given project we will be developing a website which will help users to find train details, book and cancel tickets and the exact rates of their tickets to the desired destination .With the help of online booking people can book their tickets online through internet ,sitting in their home by a single click of mouse. Using their credit cards people can easily get their tickets done within minutes.

Introduction

Database is an organized collection of data. The data is typically organized to model aspects of reality in a way that supports processes requiring information. A DBMS makes it possible for end users to create, read, update and delete data in a database. The DBMS essentially serves as an interface between the database and end users or application programs, ensuring that data is consistently organized and remains easily accessible. The DBMS manages three important things: the data, the database engine that allows data to be accessed, locked and modified and the database schema, which defines the database's logical structure. These three foundational elements help provide concurrency, security, data integrity and uniform administration procedures. The DBMS can offer both logical and physical data independence. That means it can protect users and applications from needing to know where data is stored or having to be concerned about changes to the physical structure of data.

The main purpose of maintaining database for Railway Reservation System is to reduce the manual errors involved in the booking and cancelling of tickets and make it convenient for the customers and providers to maintain the data about their customers and also about the seats available at them. Due to automation many loopholes that exist in the manual maintenance of the records can be removed. The speed of obtaining and processing the data will be fast. For future expansion the proposed system can be web enabled so that clients can make various enquiries about trains between stations. Due to this, sometimes a lot of problems occur and they are facing many disputes with customers. To solve the above problem, we design a data base which includes customer details, availability of seats in trains. no of trains and their details.

Problem Statement :

Create a user friendly Train booking management system which must be able to register users and and provide them with the details of the train and its status and the ability to book the tickets for the user specified train and must provide them with the history of the tickets that have been by them until now.

Objectives

- The objective of this Train Ticket Booking System project is to reserve the tickets for the train through online. Birth ticket confirmation is also made through this railway reservation system.
- If any person enters to book the tickets they could view the details of all the persons who have booked tickets until and also about what are all the places already booked. Presently available seats also shown. According to the passengers wish they could reserve the tickets.
- All the booking details and cost of tickets for reservation will be displayed. This is less time consuming and also reduces the overhead of railway employees.
- When it works out manually numbers of employees were needed. But through this system, we could overcome the above-mentioned problems.

System Requirements

HARDWARE REQUIREMENTS

- Hard Disk: Minimum 80 GB.
- Floppy Drive: Minimum 1.44 Mb.
- Monitor: 15 VGA Colour.
- Mouse: Any
- Ram: Minimum 2 GB.

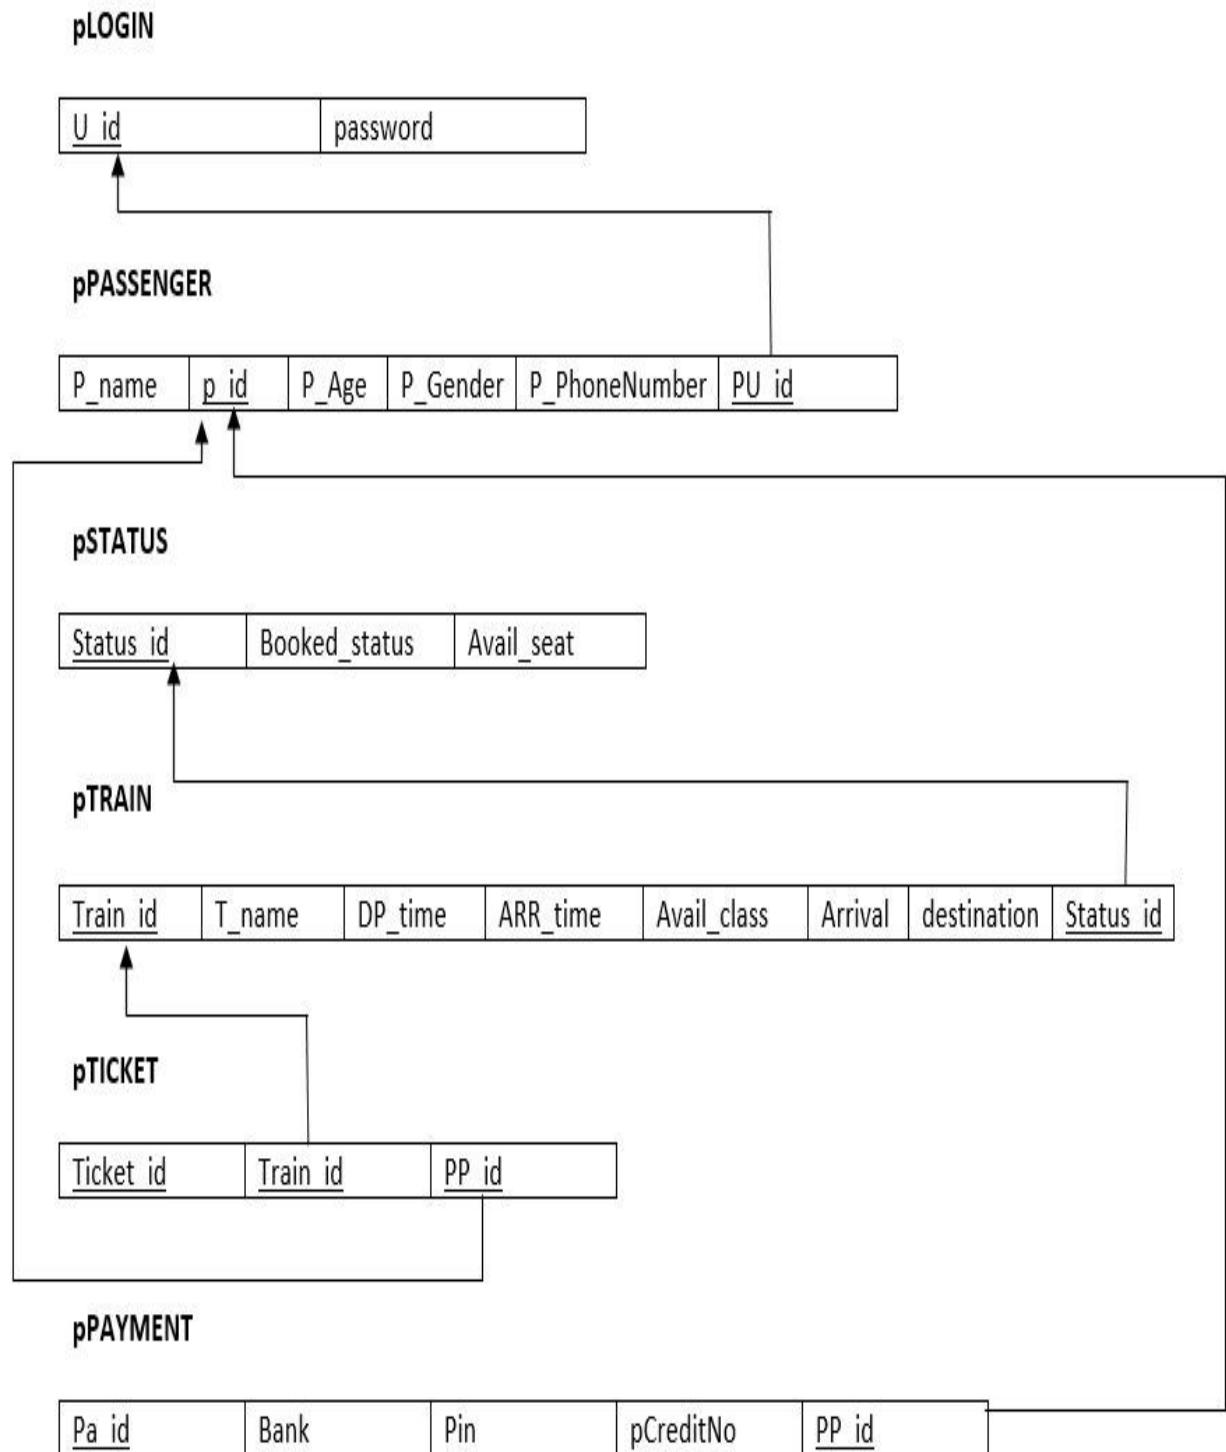

SOFTWARE REQUIREMENTS

- Operating system: – Windows Family.
- Coding Language: -Java or any Suitable
- Back end: - SQL PLUS

OUTPUT (Application Design) :

Login interface :

A screenshot of a web application window titled "LOGIN PAGE". The window has a dark gray background. At the top, there is a title bar with a small icon on the left and standard window controls (minimize, maximize, close) on the right. Below the title bar, the text "LOGIN PAGE" is centered in a light blue font. Underneath, there are two input fields: "Username :" and "Password :". Below these fields are three buttons: "Create", "Reset", and "Submit".

New user register interface :

A screenshot of a web application window titled "PASSENGER PROFILE". The window has a dark gray background. At the top, there is a title bar with a small icon on the left and standard window controls (minimize, maximize, close) on the right. Below the title bar, the text "PASSENGER PROFILE" is centered in a light gray font. Underneath, there are several input fields: "Name :", "Age :", "Gender :", "PhNo. :", "Username :", "Password :", "Bank Name :", "Credit card No. :", and "Pin :". The "Gender" field is a dropdown menu with "M" selected. At the bottom, there are two buttons: "Back" and "Submit".

Below the table is a "Back" button.

Users booking History details interface :

The screenshot shows a window titled "Tickets booked" with a table of booking history. The table has 7 columns: SL No, Date, No of tickets, Train Name, From, To, and Fare. The data is as follows:

SL No	Date	No of tickets	Train Name	From	To	Fare
1	1-1-2021	1	sa spl	pune	Delhi	280
2	5-4-2021	2	sa spl	pune	Delhi	560
3	3-2-2021	2	io spl	pune	Delhi	600
4	3-4-2021	18	fgh spl	pune	Delhi	4212
5	18-2-23	2	Bme jat	JP	JK	220
6	12-8-21	12	ab spl	pune	Delhi	2556
7	15-3-22	14	qr spl	chennai	JAT	1554
8	19-1-24	5	Mas exp	MAS	NDLS	1560

Below the table are two buttons: "Back" and "Delete records".

Conclusion :

In this paper, we design and achieve a railway online ticketing system. The system is structured into the data access layer, business logic layer and business exterior layer. We implement customer registration, customer cancellation, ticket inquiries, online booking, and online ticket refund in the system. Business process design and database design is the focus of this system which are clearly and effectively designed by the business process diagrams and database ER diagram. Real-time tickets messages will be feed backed to customers by the online railway booking system. The efficiency of booking is improved, manual booking errors is reduced, the management of railway passenger transport and customer booking is facilitated.
